## How to Grow a Fine Lawn

Plow or dig up the surface thoroughly to a depth of 12 inches and mix the soil with well rotted manure or our Archias' Sure Lawn Fertilizer, the latter being at all times preferable, as it is more durable in its effect and free from weed seeds, which are always contained in more or less quantities in stable manure.

The soil should be well pulverized before sowing, and the lawn kept free from weeds the first season. The quantity of seed required is one pound to every 300 square feet. 75 to 100 lbs. to the acre.

## Archias' Evergreen Lawn Grass Seed

This is a mixture of celebrated Kentucky Blue Grass and other soft-bladed grasses that will withstand the heat and dry weather of our summer and our most severe winters, and insure a permanent evergreen lawn. Archias' Evergreen Lawn Grass Seed is as pure and reliable as can be found anywhere. We highly recommend this mixture for general purposes. Lb., 45c; 3 lbs., \$1.25; 10 lbs., \$3.50, prepaid.

**ARCHIAS' "SHADY NOOK" LAWN MIXTURE.** A mixture of grasses that will thrive in a shady situation, under trees or close to walls where there is little sun. Lb., 45c; 3 lbs., \$1.25; 10 lbs., \$3.00, postpaid.

# Flowers Make a Home More Beautiful

EVERYONE should give more attention to planting flowers around their home. There is nothing that adds more to the looks or beauty of a home than a bed of flowers. They should be given space by the farmer as well as those who live in the city. The care is small as most flowering plants will live in almost any soil. The soil best adapted to flowers generally is a light loam containing a sufficient amount of sand to render it porous. Many flowers are larger and finer if produced on plants of vigorous growth, hence, a portion of the garden should be prepared by deep digging, thorough pulverization, and liberal enriching with plenty of well-rotted manure. We recommend Vigoro or Wizard Sheep Manure which is free from weed seeds. However, some other varieties produce largest and finest flowers on rather light, poor soil. The principal thing is to make the soil as fine and smooth as possible. Never plant flower seed when the ground is wet. Cover each lot of seed to a depth which should not be greater than six times the thickness of the seed. Plant in rows, press the soil firmly over the seed. The young plants should be thinned out to prevent crowding.

Plants are usually divided into three classes. Annuals, Biennials and Perennials.

Annuals are plants that usually live but one season. Biennials are plants that bloom the second year from seed and the plant dies after blooming.

Perennials are plants that bloom the second year from seed and the plant lives and blooms for several years.

Our flower seeds are put up in beautiful lithographed packets, with cultural directions printed on the back of each packet.
